

**Dangerous Intersection Concern
Update on 303 and Substation Correspondence**

Thanks for reaching out about this safety concern. We are aware of the community concerns and started looking at this intersection last year. We are waiting for survey data to be completed so we can determine right-of-way impacts for any proposed improvements. We need this information in order to get an accurate cost estimate for any potential improvements so we can then apply for funding. As I am sure you are aware, there is an electrical substation in the southeast corner, a house in the southwest and northwest corners and an apartment building on the northeast corner that sits very close to SR 303. We need to try and avoid right-of-way impacts as much as possible if we propose any road widening at this intersection but we first need to know exactly where the current right-of-way limits are at.

We can keep you posted once we obtain this information and are able to analyze potential countermeasures. Thanks!

Julie A. Cichello, P.E.
